1. Purpose & Scope

This document defines the User Acceptance Testing (UAT) criteria for the Receiving App developed for Transvaal Galvanisers. It covers all changes requested in the current development cycle, including feature enhancements to DocuWare delivery note capturing, database field corrections, bug fixes, and original scope verification.

A test case is provided for each item on the wishlist. Testers should mark each case as Pass, Fail, or Deferred, and record any observations in the Notes column.

Result Legend

 Pass	 Fail	 Partial	 Deferred	 Not Tested
--	--	---	--	--

2. Test Summary Checklist

A quick-reference checklist of all test items. Update the Status column as testing progresses.

#	Feature / Bug	Category	Status
1	Add Weight field to Product Table (DocuWare)	DocuWare – Table Enhancement	
2	Remove Status field from Product Table	DocuWare – Table Enhancement	
3	Remove Product Name field from Product Table	DocuWare – Table Enhancement	
4	Add Job Number field to Product Table	DocuWare – Table Enhancement	
5	Remove Weighbridge Ticket column from Product Table	DocuWare – Table Enhancement	
6	AI / Intelligent Indexing for all Product Table fields	DocuWare – AI Indexing	
7	Fabricator field editable on Receiving App	Database Fix	
8	Material Markings visible on Receiving App	Database Fix	
9	Material Length editable on Receiving App	Database Fix	
10	All required data fields coming through correctly	Database Fix	
11	'Double-Dip' process option available on Receiving App	Database Fix	
12	Multiple weighbridge ticket numbers on a delivery note	Bug Fix	
13	Duplicate item / POD entries eliminated	Bug Fix	
14	Actual quantity received can be set to 0 (short supply)	Bug Fix	
15	POD does not disappear during receiving	Bug Fix	
16	No duplicate PODs created via New POD button	Bug Fix	
17	Blank PODs not created	Bug Fix	
18	Spinner / loader does not spin endlessly	Bug Fix	
19	Edit weighbridge ticket number on Receiving App	Original Scope	
20	Edit delivery note number on Receiving App	Original Scope	

3. DocuWare Delivery Note Capturing

These tests verify changes to the product table structure inside DocuWare, the capturing workflow via Planet Press, and the Intelligent Indexing integration.

Product Table Field Changes

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
DW-01a	Weight field added to Product Table in Receiving app	1. Open the receiving app. 2. Navigate to a POD and click New POD. 3. Confirm a Weight input field is visible in the product table section. 4. Submit a value and verify it appears correctly in DocuWare after workflow processing.	Weight field is present, accepts numeric input, and is indexed into the Receiving app product table correctly.		
DW-01b	Weight field added to Product Table in DocuWare	1. Open DocuWare. 2. Navigate to Ops Document Tray 3. Confirm a Weight input field is visible in the product table of the store dialog. 4. Submit a value and verify it appears correctly in DocuWare.	Weight field is present, accepts numeric input, and is indexed into the DocuWare product table correctly.		
DW-02a	Status field removed from Product Table in Receiving app	1. Open the receiving app. 2. Navigate to a POD and click New POD. 3. Confirm Status input field is removed in the product table section.	Status field is absent from the front-end form.		
DW-02b	Status field removed from Product Table in DocuWare	1. Open DocuWare. 2. Navigate to Ops Document Tray 3. Confirm Status input field is removed in the product table section.	Status field is absent from DocuWare store dialog		
DW-03	Product Name field removed from Product Table	1. Check that the Product field name has been removed from a. The Receiving app b. DocuWare store dialog	Product Name field is absent from Receiving App New POD and DocuWare store Dialog		
DW-04	Order Number field added to Receiving app	1. Check that the Order Number field name has been added to a. The Receiving app New POD screen 2. Submit a record and verify it appears correctly in DocuWare.	Order Number field is present, accepts input, and is indexed correctly in DocuWare.		
DW-05	Job Number field added to Product Table	1. Check that the Job Number field name has been added to a. The Receiving app b. DocuWare store dialog	Job Number field is present and correctly indexed in DocuWare.		

Intelligent Indexing (AI)

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
DW-06	Intelligent Indexing populates all Product Table fields automatically	- Scan or upload a customer delivery note document. - Allow DocuWare Intelligent Indexing to process the document. - Review each field in the product table (Item Code, Item Description, Item Size, Item Qty, Job Number, Other, Material Length, Weight). - Confirm values are pre-populated from the document.	All product table fields are populated by Intelligent Indexing with values extracted from the delivery note. Manual correction is possible where confidence is low.		
DW-07	Intelligent Indexing does not populate removed fields	- After Intelligent Indexing runs, confirm that Status, Product Name, and Weighbridge Ticket are NOT present or pre-populated. - Verify no stale field mappings remain in the DocuWare cabinet configuration.	Removed fields are absent and not indexed by the AI process.		

4. Database Fixes

These tests verify that database-backed fields are correctly exposed, editable, and populated on the Receiving App.

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
DB-01	Fabricator field is editable	- Open an existing POD on the Receiving App. - Locate the Fabricator field. - Clear the current value and type a new fabricator name. - Save / confirm the receiving event. - Reload the POD and confirm the updated fabricator name persists.	Fabricator field accepts input and the updated value is saved and displayed correctly on reload.		
DB-02	Material Markings field is visible and populated	- Open a POD item on the Receiving App. - Confirm the Material Markings field is visible. - Verify the value from the database is displayed correctly. - Edit the value and confirm the change is saved.	Material Markings field is visible, correctly populated from the database, and editable.		
DB-03	Material Length field is editable	- Open a POD item on the Receiving App. - Locate the Material Length field. - Modify the value to a different length. - Save and reload. - Confirm the updated length is stored and displayed.	Material Length field can be edited and the new value persists after save.		
DB-04	All required data fields come through correctly	- Create a new receiving event with all fields completed. - Review the submitted record in DocuWare. - Cross-check each field (Item Code, Item Description, Item Size, Item Qty, Fabricator, Material Markings, Material Length, Process, Bay, Packaging Method,	Every required field submitted on the form appears correctly in DocuWare with no missing or null values.		

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
		Delivery Note #, Job Number, Order Number, Weight) against what was entered.			
DB-05	'Double-Dip' option available in Process dropdown	1. Open the receive item modal. 2. Click the Process dropdown. 3. Confirm 'Double-Dip' is present as a selectable option. 4. Select 'Double-Dip' and complete the receiving event. 5. Verify the value is stored in DocuWare.	'Double-Dip' appears in the Process dropdown and the value is correctly indexed in DocuWare after submission.		

5. Bug Fixes

These tests confirm that previously reported defects have been resolved and the system behaves as expected under normal and edge-case conditions.

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
BF-01	No duplicate item entries on the Receiving App	1. Open a POD item on the Receiving App. 2. Confirm the item appears only once (as per the captured POD on DocuWare). 3. Repeat for 3 different PODs. 4. Verify no duplicate rows are present.	Each item appears exactly once in the Receiving. No duplicate rows.		
BF-02	No duplicate PODs on the Receiving App	1. Capture a POD on DocuWare. 2. Navigate to the pending PODs list. 3. Confirm no duplicate POD records exist for the same delivery note. 4. Complete a receiving event and re-check.	POD records are unique per delivery note. No duplicate PODs visible in the list.		
BF-03	Actual quantity received can be set to 0	1. Open the receive item modal. 2. Select 'Short Supplied' for the quantity discrepancy. 3. Clear the Actual Quantity Received field and enter 0. 4. Confirm the form accepts 0 without reverting to the expected quantity. 5. Submit and verify the value 0 is stored.	A value of 0 is accepted for the Actual Quantity Received field and correctly stored in DocuWare.		
BF-04	POD does not disappear during receiving	1. Open a POD on the Receiving App. 2. Begin the receiving process (open the receive modal). 3. Without completing the receive, navigate away and return. 4. Confirm the POD is still listed. 5. Complete the receive and confirm the POD updates its status correctly.	The POD remains visible throughout the receiving process and updates correctly upon completion.		
BF-05	No duplicate PODs created	1. Click the 'New POD' button once. 2. Complete the form and submit.	Only one POD is created per form		

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
	via New POD button	- Return to the POD list and confirm only one new POD was created. (This usually takes up to a minute to reflect. The user must click refresh button). - Repeat, clicking New POD rapidly multiple times. - Confirm only one POD is created per deliberate submission.	submission. Rapid or repeated clicking of New POD does not produce duplicates.		
BF-06	Blank PODs are not created	- Click New POD without filling in any required fields. - Attempt to submit. - Confirm validation prevents submission. - Verify no blank POD record appears in the list.	Form validation prevents a blank POD from being created. No empty records appear in DocuWare or the Receiving App.		
BF-07	Spinner / loader does not spin endlessly	- Perform a standard receiving event from start to finish. - Observe the loading indicator during each async operation. - Confirm the spinner disappears once each operation completes. - Deliberately trigger an error (e.g. disconnect network briefly) and confirm the spinner stops and an appropriate message is shown.	The loading spinner appears only during active processing and resolves correctly upon success or failure. It does not spin indefinitely.		

6. Original Scope Verification

These tests confirm requirements from the original project scope that must be verified as still functioning correctly.

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
OS-01	Edit weighbridge ticket number on Receiving App	- Open an existing POD record on the Receiving App. - Locate the weighbridge ticket number field. - Edit the value to a new ticket number. - Save the change. - Confirm the updated value is reflected in DocuWare.	Weighbridge ticket number can be edited on the Receiving App and the new value is saved and indexed in DocuWare.		
OS-02	Edit delivery note number on Receiving App	- Open an existing POD record on the Receiving App. - Locate the delivery note number field. - Edit the value. - Save the change. - Confirm the updated delivery note number is	Delivery note number can be edited on the Receiving App and the updated value persists in DocuWare.		

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
		stored and displayed correctly.			

7. End-to-End Scenarios

These tests exercise the full workflow from receiving a delivery to DocuWare storage, using realistic data. Run these after all individual test cases have passed.

Test Case ID	Description	Steps to Test	Expected Result	Pass / Fail	Notes
E2E-01	Full receiving workflow – no defects, standard delivery	1. Log onto DocuWare 2. Capture and store a POD in the Ops Document Tray 3. Log in to the Receiving App. 4. Navigate to Pending PODs and check that the POD captured is represented. 5. Open the receive modal. Confirm all new fields are visible. 6. Enter all required fields and submit. 7. Confirm the item is marked as received in DocuWare. 8. Verify the DocuWare document contains all expected index values.	Item is received successfully. All fields are correctly indexed in DocuWare. No duplicate records created.		
E2E-03	Full receiving workflow – defect	1. Open a POD item and begin receiving. 2. Select 'Yes' for defect detected. 3. Complete the defect capture form with at least one defect category. 4. Submit. 5. Verify DocuWare document includes defect data	Defect information is indexed in DocuWare correctly.		
E2E-04	New POD creation and full receive cycle	1. Click New POD and complete all required fields including multiple weighbridge ticket numbers. 2. Submit. 3. Confirm a single POD is created in the list. This usually take up to a minute to reflect. The user can hit the refresh button to refresh the POD data 4. Receive all items on the POD. 5. Confirm the POD status updates correctly and no duplicates appear.	One POD is created. All items are receivable. No duplicates. Status updates correctly after all items are received.		

8. Defect Log

All defects identified during UAT must be logged below. Each defect must be assessed for severity and resolved (or formally accepted) prior to go-live sign-off.

Defect #	TC Ref	Description	Steps to Reproduce	Severity	Assigned To	Status	Resolution
D-001		Order Number not stored after capturing delivery notes		High	Dane	Testing	
D-002		Other Column not stored after any process		High	Dane	Testing	
D-003		Cancel button can be pressed during loading screens and then causes strange behaviour		Medium	Dane	Testing	
D-004		Fabricator's captured info not reflecting in Receiving app		Low	Dane	Testing	
D-005		Duplicate fields (DNDOCID=DNDOCIDI; Lifting lug nut=No Hanging lifting lug-nut required Quantity; No Hanging hang notch required Quantity=Hang Notch)		Low	Dane	Testing	

Severity definitions:

- Critical – Process cannot proceed; blocks go-live.
- High – Significant impact on functionality; workaround exists but is not acceptable long-term.
- Medium – Functional issue with an acceptable workaround; to be resolved within 30 days of go-live.
- Low – Minor cosmetic or usability issue; does not affect process completion.

9. Outstanding Items & Agreed Actions

The following items were identified during UAT and are agreed as actions to be completed post-UAT or accepted as known limitations:

#	Item / Outstanding Issue	Agreed Action	Owner	Target Date
1				
2				

3				
4				
5				

10. Sign off

By signing below, each party confirms that they have reviewed the UAT results, that all Critical and High defects have been resolved or formally accepted, and that the Receiving App Wishlist is approved for deployment to the production environment.

GO-LIVE DECISION

Go-Live Approved: YES / NO / CONDITIONAL

Planned Go-Live Date: _____

Conditions (if applicable):

All issues identified during UAT must be logged and resolved before this document can be signed off. A Fail result on any Priority 1 item blocks sign-off.
